

PROTECTIVE FACTORS EVIDENCE MAP

This evidence map illustrates a review of research on different factors which protect against violent extremism.

KEY	
	BEHAVIOUR
	INTENTION
	ATTITUDE

This evidence map on page 2 illustrates the findings of a review of research on protective factors against violent extremism.

The map is based on an analysis of 52 papers published between 1998 and 2021.

Details of the methodology used to compile the map can be found in the Full Report.

ILLUSTRATIVE MAP BREAKDOWN

Each box represents one factor and factors are clustered according to different levels of influence. These include individual factors such as those relating to psychology, socio-economics, religion, activism, and civic attachment, and factors linked to the family, society, school and peer group.

A single factor could be identified in multiple studies, and each study typically refers to more than one protective factor.

Studies are numbered and are colour coded based on the outcome that is being assessed in each study. These include violent extremist **attitudes**, **intentions**, and **behaviours**.

The map should be read alongside the Full Report. Although it provides an overview of the factors researchers have identified to date, it does not include details on the strength or direction of the relationships, or provide other relevant information about non-linear relationships or approaches to sampling.

A more detailed explanation of the nature of protective factors and how researchers have sought to explain them is set out in the Full Report which can be found at: www.crestresearch.ac.uk

The Centre for Research and Evidence on Security Threats (CREST) is a national hub for understanding, countering and mitigating security threats. It is an independent Centre, commissioned by the Economic and Social Research Council (ESRC) and funded in part by the UK security and intelligence agencies and UK Home Office (ESRC Award: ES/V002775/1).
